EzV System

INCREASED CUSTOMER SATISFACTION with an IMPROVEMENT TO YOUR BOTTOM LINE

- NuWhirl's **EzV System** is an innovative tubing system designed for a quicker and simpler installation of jetted bath whirlpool systems.
- Our flexible vinyl tubing material replaces the more rigid piping of other systems. The flexibility of this tubing is faster and easier to install
- The flexibility of the EzV tubing reduces the risk of leaks, since the material bends easily to accommodate the connection between jets. A typical installation includes the use of glue. An optional clamp is also available.
- NuWhirl's EzV System reduces labor time and decreases material cost. This means increased profit and improved customer satisfaction.
