

CozyHeat Bathtub Surface Heaters User Operating Instructions

It is recommended to turn the heater on for five-ten minutes prior to entering the tub. Once the heater on/off button is depressed the heater will apply heat to the heated surfaces and will increase the temperature to a comfortable level.

Once the heater button is depressed, the heater will run for 30 minutes and will then shut off. There is no need to press the heater button to turn the heater off as it will automatically shut off after the 30 minute cycle.

WARNING! To prevent accidental overheating, DO NOT cover the seat with any type of insulating material (e.g. towel, bathrobe, or similar covering) when the tub is empty of water.

If at any time, you feel uncomfortable with the temperature of the heating area, simply depress the heater on/off button to turn the heater off.
