

# INFUSION™

Microbubble Therapy by NuWhirl®

*Rejuvenate Mind and Body with  
the Liquid Luxury of Infusion*

*Experience:* INFUSION™

## INFUSION BY NUWHIRL® IS LIQUID LUXURY

You're floating within the silky embrace of millions of micro-sized bubbles, surrounded by a pool of bathwater that continuously warms your body. There are no interruptions. No anxiety. No aches and pains.

It's just you:  
*your* body relaxed,  
*your* skin rejuvenated,  
*your* mind set free.

---

### AN INCREDIBLE BATHING EXPERIENCE EVERY DAY

*Infusion* combines pressurized water with oxygen-rich microbubbles that moisturize, restore, and exfoliate skin and help relax mind and body. The experience feels more sumptuous and more opulent than any ordinary bath can offer.

As *Infusion* creates these microbubbles, it envelopes and massages your body. The system maintains the water's heat to extend your comfort throughout the bath.

NuWhirl's technology is durable and proven, thoroughly tested to provide many years of bath times and to help you enjoy every moment of them.

### BEYOND THE BATH

*Infusion* users tell us they don't want their experience to end. If you must towel off and face the demands of the outside world, take comfort in knowing that you take the effects with you.

- Promotes the release of muscle tension
- Leaves your body hydrated
- Softens skin to the touch

A woman is shown floating underwater in a dark, deep blue environment. She is wearing a white, ethereal, multi-layered dress that billows around her. Her right arm is extended upwards towards the surface, where light reflects off the water. She is looking towards the camera with a calm expression. The overall mood is serene and mysterious.

*The Benefits of:* INFUSION™

EVERYDAY LUXURY DOESN'T HAVE TO END

# The effects of *Infusion* stay with you even when the experience is over.

---

## **THERMAL THERAPY**

During a normal bath, the water begins to cool, and your body fights to retain its warmth. *Infusion* works differently. The bathtub's temperature increases approximately 1°F every hour—even without adding more water—which can help its warming effects linger after you get out of the tub.

## **MASSAGE THERAPY**

Skip the spa appointment. *Infusion* stimulates your skin to promote restfulness and the release of muscle tension. Keep the relaxing effects of your experience with you throughout your day.

## **OXYGEN THERAPY AND CLEANSING**

*Infusion* helps clean and exfoliate your skin. Its liquid thin film technology super-saturates your bath with up to 50% more dissolved oxygen than in regular water.

## **BEAUTY**

*Infusion* softens and hydrates skin every day. Combine the benefits of our technology with the tranquility of a microbubble massage.

A microscopic view of plant cells, showing a network of dark, interconnected cell walls forming a honeycomb-like pattern. The cells are mostly hexagonal and pentagonal in shape. The background is a light blue color, and the overall image has a soft, slightly blurred appearance.

*The Science of:* INFUSION™

# We've tested it so that you'll *love* it.

---

NuWhirl® sponsored a third-party laboratory to conduct instrument measurements as well as an attitudinal survey on the effects of *Infusion*. The methodology used two controls: dry skin and skin after a regular bath. We combined this testing with our own in-house research and found...

- *Since Infusion maintains even water temperature, people who use Infusion feel warmer, and the warming effects linger after the bath is over.*

- *Infusion's water feels soft and silky compared to regular water.*

- *Infusion stimulates the epidermal layer of skin and promotes relaxation, rejuvenation, and the release of muscle tension.*

- *Dissolved oxygen levels in the bathwater increased up to 50%. With Infusion, bubbles form and disperse to create an exothermic reaction. Laboratory tests show that microbubbles kill the bacteria Legionella and Aeruginosa.*

- *100% of test participants demonstrated improved hydration and moisture content in the upper layer of skin after a 10-minute immersion in Infusion.*

*The average: a 14.24% increase over untreated skin.*

- *After a 10-minute bath, Infusion increased the softness of our participants' skin. 79.31% of test participants had an average improvement of 10%.*

People who took part in this third-party study had extremely favorable opinions of Infusion that exceeded actual lab measurements. Nearly all said that they would recommend purchasing Infusion to a family member or friend.

*Engineered and supported  
by people you trust*
